Mathematical Problem Solving - ALAN H. SCHOENFELD 2014-06-28

This book is addressed to people with research interests in the nature of mathematical thinking at any level, to people with an interest in "higher-order thinking skills" in any domain, and to all mathematics teachers. The focal point of the book is a framework for the analysis of complex problem-solving behavior. That framework is presented in Part One, which consists of Chapters 1 through 5. It describes four qualitatively different aspects of complex intellectual activity: cognitive resources, the body of facts and procedures at one's disposal; heuristics, "rules of thumb" for making progress in difficult situations; control, having to do with the efficiency with which individuals utilize the knowledge at their disposal; and belief systems, one's perspectives regarding the nature of a discipline and how one goes about working in it. Part Two of the book, consisting of Chapters 6 through 10, presents a series of empirical studies that flesh out the analytical framework. These studies document the ways that competent problem solvers make the most of the knowledge at their disposal. They include observations of students, indicating some typical roadblocks to success. Data taken from students before and after a series of intensive problem-solving courses document the kinds of learning that can result from carefully designed instruction. Finally, observations made in typical high school classrooms serve to indicate some of the sources of students' (often

counterproductive) mathematical behavior. *Interaction in the Language Curriculum* - Leo Van Lier 2014-06-03

Interaction in the Language Curriculum offers an innovative theory of language education integrating curriculum practice, research and teaching. It emphasises the interdependence of knowledge and values and stresses the central importance of learning as a social process. Leo van Lier argues that moral as well as intellectual and practical principles must underlie curriculum development and everyday teaching, captured in his triple focus on Awareness, Autonomy, and Authenticity. In addition to its rich grounding in language education practice, the book draws support for his position from diverse sources in sociology, philosophy and cognitive science, from the work of Bourdieu, Giddens, Wittgenstein, Peirce, Vygotsky, Bakhtin, and Dewey. In the current broadening context of language education this study makes an important contribution to research. It presents a coherent philosophical theory as well as considering practical issues in implementation of a new language curriculum. As such, it will be of great benefit to teachers, applied linguists and educationalists generally.

The Powers of Literacy (RLE Edu I) - Bill Cope 2014-06-17

Literacy remains a contentious and polarized educational, media and political issue. What has emerged from the continuing debate is a recognition that literacy in education is allied closely with matters of language and culture,

ideology and discourse, knowledge and power. Drawing perspectives variously from critical social theory and cultural studies, poststructuralism and feminisms, sociolinguistics and the ethnography of communication, social history and comparative education, the contributors begin a critical interrogation of taken-for-granted assumptions which have guided educational policy, research and practice.

The Cat with Boots - Charles Perrault 2021-06-02

The cat with boots. (Le Maître Chat ou le Chat bottand, in French) is a European folk tale compiled, in 1695, by Charles Perrault and published in 1697 in his book *Tales of Antañor* (*Histoires ou contes du temps passand. Avec des moralitands*). as Master Cat or Puss in Boots. 3. It tells the story of a cat that, based on cunning and deceit, you get the fortune and the hand of a princess for your master, totally poor. The 1695 handwritten book is dedicated to Mademoiselle, niece of Louis XIV. Puss in Boots was a hit from its first publication and remains

popular, despite its ambiguous morals. The character is inspired by at least two stories previously written: the novel *The Pleasant Nights* by Gianfrancesco Straparola (1550, the first part and 1553, the second part) . and the *Pentamerorn* (*The tale of tales*), collection of stories by Giambattista Basile published in five volumes, from 1634 to 1636. Puss in Boots has inspired designers, composers, choreographers, and just about every type of artist. It appears in the third act of the ballet *The Sleeping Beauty* of Tchaikovsky. In addition, the adaptations of the story have been multiple, from theater to cinema and comics, through opera, parodies ...

The Double - José Saramago 2005-10-03

A "wonderfully twisted meditation on identity and individuality" from a Nobel Prize-winning author who pushes fiction to its very limits (*The Boston Globe*). As this novel by the author of *Blindness* and *All the Names* begins, Tertuliano Máximo Afonso is a divorced, depressed history teacher. To lift his spirits, a colleague suggests he rent a certain video. Tertuliano watches the film, unimpressed. But during the night, when he is awakened by noise, he finds the VCR replaying the video and watches in astonishment as a man who looks exactly like him—or, more specifically, exactly like he did five years earlier, mustachioed and fuller in the face—appears on the screen. Against his own better judgment, Tertuliano decides to pursue his double. As he roots out the man's identity, what begins as a whimsical chase becomes a probing investigation into what makes us human. Can we be reduced to our outward appearance, rather than the sum of our experiences? The inspiration for the film *Enemy* starring Jake Gyllenhaal and directed by Denis Villeneuve, *The Double* is a timeless novel from a writer John Updike described in *The New Yorker* as "like Faulkner, so confident of his resources and ultimate destination that he can bring any impossibility to life by hurling words at it." "It's tempting to think of [*The Double*] as his masterpiece." —*The New York Times* Translated from the Portuguese by Margaret Jull Costa

Teaching and Learning for the Twenty-First Century - Fernando M. Reimers 2019-01-02

This book describes how different nations have defined the core competencies and skills that young people will need in order to thrive in the twenty-first-century, and how those nations have fashioned educational policies and curricula meant to promote those skills. The book examines six countries—Chile, China, India, Mexico, Singapore, and the United States—exploring how each one defines, supports, and cultivates those competencies that students will need in order to succeed in the current century. Teaching and Learning for the Twenty-First Century appears at a time of heightened attention to comparative studies of national education systems, and to international student assessments such as those that have come out of PISA (the Program for International Student Assessment), led by the Organisation for Economic Co-operation and Development. This book's crucial contribution to the burgeoning field of international education arises out of its special attention to first principles—and thus to first questions: As Reimers and Chung explain, “much can be gained by an explicit investigation of the intended purposes of education, in what they attempt to teach students, and in the related questions of why those purposes and how they are achieved.” These questions are crucial to education practice and reform at a time when educators (and the students they serve) face unique, pressing challenges. The book's detailed attention to such questions signals its indispensable value for policy makers, scholars, and education leaders today.

Second Suns - David Oliver Relin 2016-10-01

Now in paperback: a #1 New York

Times-bestselling author's gripping chronicle of “two doctors . . . bringing light to those in darkness” (Time) The publisher will donate a portion of its proceeds on the sale of this book to the Himalayan Cataract Project. Second Suns is the unforgettable true story of two very different doctors with a common mission: to rid the world of preventable blindness. Dr. Geoffrey Tabin was the high-achieving “bad boy” of his class at Harvard Medical School. Dr. Sanduk Ruit grew up in a remote village in the Himalayas, where cataract blindness—easily curable in modern hospitals—amounts to an epidemic. Together, they pioneered a new surgical method, by which they have restored sight to over 100,000 people—all for about \$20 per operation. Master storyteller David Oliver Relin brings the doctors' work to vivid life through poignant portraits of their patients, from old men who can once again walk treacherous mountain trails, to children who can finally see their mothers' faces. The Himalayan Cataract Project is changing the world—one pair of eyes at a time.

The Unschooled Mind - Howard Gardner 2011-03-29

"I like to invoke the image of figure and ground. In any scene, certain elements stand out as figures, as dominant foci, against a less prominent background, which (ideally) supports the central figure. At present, test scores and rankings have become figures, so dominant that they virtually occlude everything else. In my preferred portrait of education, a well-schooled mind becomes the central figure--a mind that truly understands disciplinary ways of thinking and one that also encourages respectful and ethical behavior. All the rest--including the instruments of accountability should be in the background, providing support for that central, powerful image. Why the current ideal of school focuses so much on a certain view of knowledge, transmitted in a certain way, and documented in a certain way, is a question for historians and policy makers: That it has taken this turn is a source of regret to those of us who harbor a different view of knowledge and education." -- From the introduction by the author (p. xxviii).

Handbook of Research on Reading

Comprehension - Susan E. Israel 2014-06-03

The Handbook of Research on Reading Comprehension assembles researchers of reading comprehension, literacy, educational psychology, psychology, and neuroscience to document the most recent research on the topic. It summarizes the current body of research on theory, methods, instruction, and assessment, including coverage of landmark studies.

Designed to deepen understanding of how past research can be applied and has influenced the present and to stimulate new thinking about reading comprehension, the volume is organized around seven themes: historical perspectives on reading comprehension theoretical perspectives changing views of text elements of reading comprehension assessing and teaching reading comprehension cultural impact on reading comprehension where to from here? This is an

essential reference volume for the international community of reading researchers, reading psychologists, graduate students, and professionals working in the area of reading and literacy.

A History of Reading in the West - Guglielmo Cavallo 2003

Literature has not always been written in the same ways, nor has it been received or read in the same ways over the course of Western civilization. Cavallo (Greek palaeography, U. of Rome La Sapienza), Chartier (Ecole des Hautes Etudes en Sciences Sociales, Paris) and a number of other international contributors, address themes that highlight the transformation of reading methods and materials over the ages, such as the way texts in the Middle Ages were often written with the voice in mind, as they would have been read aloud, or even sung. Articles explore the innovations in the physical evolution of the book, as well as the growth and development of a broad-based reading public.

The Theory of Communicative Action -

Jürgen Habermas 2015-10-07

This study offers a systematic reconstruction of the theoretical foundations and framework of critical social theory. It is Habermas' "magnum opus", and it is regarded as one of the most important works of modern social thought. In this second and final volume of the work, Habermas examines the relations between action concepts and systems theory and elaborates a framework for analyzing the developmental tendencies of modern societies. He discusses in detail the work of Marx, Durkheim, G.H. Mead and Talcott Parsons, among others. By distinguishing between social systems and what he calls the "life-world", Habermas is able to analyze the ways in which the development of social systems impinges

upon the symbolic and subjective dimensions of social life, resulting in the kind of crises, conflicts and protest movements which are characteristic of advanced capitalist societies in the late-20th century.
