An Academy at the Court of the Tsars Nikolaos Chrissidis 2016-08-10 The first formally organized educational institution in Russia was established in 1685 by two

Greek hieromonks, Ioannikios and Sophronios Leichoudes. Like many of their Greek contemporaries in the

seventeenth century, the brothers acquired part of their

schooling in colleges of post-Renaissance Italy under a precise copy of the Jesuit curriculum. When they created a school in Moscow, known as the Slavo-Greco-Latin Academy, they emulated the structural characteristics, pedagogical methods, and program of studies of Jesuit prototypes. In this original work, Nikolaos A. Chrissidis analyzes the academy's impact on Russian educational practice and situates it in the contexts of Russian-Greek cultural relations and increased contact between Russia and Western Europe in the seventeenth century. Chrissidis demonstrates that Greek academic and cultural influences on Russia in the second half of the seventeenth century were Western in character, though Orthodox in doctrinal terms. He also shows that Russian and Greek educational enterprises were part of the larger European pattern of Jesuit academic activities that impacted Roman Catholic and Eastern Orthodox educational establishments and curricular choices. An Academy at the Court of the Tsars is the first study of the Slavo-Greco-Latin Academy in English and the only one based on primary sources in Russian, Church Slavonic, Greek, and Latin. It will interest scholars and students of early modern Russian and Greek history, of early modern European intellectual history and the history of science, of Jesuit education, and of Eastern Orthodox history and culture.

African Cultural Astronomy Jarita Holbrook 2008-01-01
This is the first scholarly collection of articles focused on the cultural astronomy of the African continent. It weaves together astronomy, anthropology, and Africa and it includes African myths and legends about the sky, alignments to celestial bodies found at archaeological sites and at places of worship, rock art with celestial imagery, and scientific thinking revealed

in local astronomy traditions including ethnomathematics and the creation of calendars.
