**Facility Management Technology** Eric Teicholz 1995-03-02 The past few years have seen the emergence of a number of powerful new technologies specifically designed to help facility managers do their jobs. Unfortunately, a number of political, technical, and procedural impediments have resulted in the majority of computer-aided facility management (CAFM) systems ending up as "shelfware" sitting on the shelves of well-intentioned users. Written by two leading international experts in the field of applying information technology to facility management, this book provides facility managers with the detailed, hands-on guidance required for successfully supporting CAFM systems. Technical and procedural topics focused on within the book include strategic technology planning, cost/benefit analysis, CAFM system functionality, implementation planning, and technology trends. In Part I of Facility Management Technology, the authors draw on their experiences as information system consultants to identify major issues and successful strategies associated with planning, implementing, and managing facility management technology. Issues addressed deal not only with CAFM itself, but also with the processes and procedures required for minimizing the risks of technology and successfully implementing systems in the shortest possible time frame. Part 2 is devoted entirely to real-life case histories from a number of North American and Japanese corporations and government organizations, including SONY, Aetna, Siemens, the Bank of Boston, Long-Term Credit Bank of Japan, Pioneer HI-Bred, Florida Hospital, and the City of Toronto. Selected for their relevance to specific aspects of CAFM, each study describes how a particular organization dealt with one or more crucial problems associated with the successful deployment of CAFM technology—addressing both day-to-day operations and, importantly, the larger organizational context. Facility Management Technology is the only truly comprehensive text on the subject. With the wealth of practical advice from Teicholz and Ikeda and its case-study orientation, this book will be an important resource for facility and real estate managers, IS professionals, facility management and design consultants, and students. The only totally practical, case-study based guide to using automation in facility management. FACILITY MANAGEMENT TECHNOLOGY Lessons from the U.S. and Japan From performing strategic facility technology planning to a cost/benefit analysis, from selecting and managing CAFM systems for your organization to integrating CAFM systems with other types of corporate computing systems, this book offers detailed, hands-on guidance to virtually every aspect of facility management technology. Written by two leading international experts in the field, it analyzes and contrasts how facility management technology is now being used in North America and Japan and describes successful strategies companies have evolved for incorporating CAFM into their day-to-day operations. "I strongly believe that the clear analysis of facility management technologies and the unique lessons to be learned from each case study in the book will help facility managers establish their own total systems concept." —Yoshiro Koyama Facility Manager SONY "The authors have provided a contemporary, accurate, and insightful view of the application of CAFM into the American and Japanese corporate environment. The 'icing on the cake' is the generic and real world case studies that provide much needed realism to CAFM. Readers should come away enthused by their increased understanding and feeling secure that others have blazed the trail ahead of them." —John A. Paccione, AIA Director of Design Florida Hospital "The authors' insights into past, present, and future facility management trends, as well as the clear and practical examples shown in this book, will surely contribute to the development of facility management and CAFM in both the U.S. and Japan." —Dr. Shigeuyki **The Career Guide** Dun & Bradstreet 1995

Through customization you can increase screen real estate, streamline workflows, and create more accurate drawings by unleashing powerful programming languages that allow the user to command the software how to work, instead of the other way around. AutoCAD customization is commonly performed by system administrators and CAD managers, but senior drafters and savvy users are increasingly taking customization into their own hands. AutoLISP and

VBA are two popular and versatile tools that allow for going beyond the boundaries of normal user interface customization options, allowing users to: Enforce drawing and CAD standards, and automate repetitive tasks Customize the workspace, including tool sets, ribbon tabs and panels, and palettes Modify graphical objects, set system variables, integrate with external software, and more Manage blocks, change the interface, create dialog boxes, and communicate with Microsoft Office applications The ideal design environment puts the tools you need right at your fingertips, removes unnecessary steps, and fosters precision through good communication. Customizing, including applying AutoLISP and VBA to AutoCAD, enables all of this and much more. For the designer who needs to work smarter because it's impossible to work any harder, AutoCAD Platform Customization provides the key information, insight, and techniques that will help to increase your productivity with AutoCAD.
