[Stop the Investing Rip-off](#) - David B. Loeper
2009-05-04

The Investing Rip-Off How can you tell whether an advisor is conflicted or looking out for your best interests? What questions should you ask when making important investment decisions? How can you select investments that avoid needless expenses and risk? As investors, many of us have put our faith in the financial services industry when it comes to the stewardship of our wealth. Unfortunately, the industry has consistently failed us on this front. The financial services industry—including banks, brokerages, and insurance companies—is unique among all others. Through effective advertising and marketing, it's been able to evade being painted with the brush other underperforming industries have, and in most cases, their well-designed sales pitch has allowed them to effectively prey on the emotional desires of investors. Based on author David Loeper's nearly twenty-five years of experience with this industry's inner workings, *Stop the Investing Rip-off* reveals the real costs of the investments we make, details the false and misleading information sold to us, and discusses the devastating effects they can have on personal wealth. With this book as your guide, you'll gain invaluable insights into the major segments of the financial services industry, how they spin their offerings, and the questions you need to ask before committing any money to a financial product or service you may be interested in. Filled with in-depth insights and practical advice, *Stop the Investing Rip-off* sheds much-needed light on the often-unseen aspects of the financial services industry—exposing what only insiders

know—and shows you how to avoid the conflicts of interest that could compromise your financial well-being.

International Economics - Henry Thompson
2011-04-12

Latest Edition: *International Economics: Global Markets and Competition* (4th Edition) This book integrates the microeconomics of trade with international finance and open economy macroeconomics. The emphasis throughout is on international competition and the limits of trade policy. Economics began with a debate over tariffs. Domestic industries lobby for protection against foreign competitors or export subsidies. Government policy makers dole favors in return for cash and votes. Governments negotiate free trade agreements but disregard them when possible with tariffs, export subsidies, and other

policies to influence foreign trade and investment. The forces of international competition, however, eventually overwhelm government policy. This text presents the critical issues of international trade and finance. Trade theory includes partial equilibrium market analysis, neoclassical trade models, constant cost production, factor proportions production, and models of industrial organization. The text integrates concepts from international finance and the basic models of open economy macroeconomics. The presentation uses graphs with numerical examples making the theory easier for students, especially when combined with more general classroom presentation. The text does not assume previous courses in intermediate economics or calculus but develops the theory with simple tools. Numerous questions give students confidence to use the theoretical models and concepts. Over 250 boxed examples illustrate the theory, many with visually descriptive charts and plots. The text is concise in its presentation style. Students enjoy its clear straightforward style and instructors notice the difference on exams.
