A Data-Based Assessment of Research-Doctorate Programs in the United States

(with CD) - Policy and Global Affairs 2011-07-26

A Data-Based Assessment of Research-Doctorate Programs in the United States provides an unparalleled dataset that can be used to assess the quality and effectiveness of doctoral programs based on measures important to faculty, students, administrators, funders, and other stakeholders. The data, collected for the 2005-2006 academic year from more than 5,000 doctoral programs at 212 universities, covers 62 fields. Included for each program are such characteristics as faculty publications, grants, and awards; student GRE scores, financial support, and employment outcomes; and program size, time to degree, and faculty composition. Measures of faculty and student diversity are also included. The book features analysis of selected findings across six broad fields: agricultural sciences, biological and health sciences, engineering, physical and mathematical sciences, social and behavioral sciences, and humanities, as well as a discussion of trends in doctoral education since the last assessment in 1995, and suggested uses of the data. It also includes a detailed explanation of the methodology used to collect data and calculate ranges of illustrative rankings. Included with the book is a comprehensive CD-ROM with a data table in Microsoft Excel. In addition to data on the characteristics of individual programs, the data table contains

illustrative ranges of rankings for each program, as well as ranges of rankings for three dimensions of program quality: (1) research activity, (2) student support and outcomes, and (3) diversity of the academic environment. As an aid to users, the data table is offered with demonstrations of some Microsoft Excel features that may enhance the usability of the spreadsheet, such as hiding and unhiding columns, copying and pasting columns to a new worksheet, and filtering and sorting data. Also provided with the data table are a set of scenarios that show how typical users may want to extract data from the spreadsheet. PhDs.org, an independent website not affiliated with the National Research Council, incorporated data from the research-doctorate assessment into its Graduate School Guide. Users of the Guide can choose the weights assigned to the program characteristics measured by the National Research Council and others, and rank graduate programs according to their own priorities. *How to Write a Successful Research Grant Application* - Willo Pequegnat 2010-11-02 Over the last fifty years behavioral and medical research has been generously supported by the federal government, private foundations, and other philanthropic organizations contributing to the development of a vibrant public health system both in the United States and worldwide. However, these funds are dwindling and to stay competitive, investigators must understand the funding environment and know how to translate

their hypotheses into research grant applications that reviewers evaluate as having scientific merit. The Second Edition of 'How to Write a Successful Research Grant Application' is the only book of its kind written by federal research investigators which provides technical assistance for researchers applying for biobehavioral and psychosocial research funding and can give them an edge in this competitive environment. The book provides invaluable tips on all aspects of the art of grantsmanship, including: how to determine research opportunities and priorities, how to develop the different elements of an application, how to negotiate the electronic submission and review processes, and how to disseminate the findings. Charts, visual aids, Web links, an extensive real-world example of a research proposal with budget, and a "So You Were Awarded Your Grant—Now What?" chapter show prospective applicants how to:

- Formulate a testworthy—and interesting—hypothesis.
- Select the appropriate research mechanism.
- Avoid common pitfalls in proposal writing.
- Develop an adequate control group.
- Conduct a rigorous qualitative inquiry.
- Develop a budget justification of costs.
- Develop a human subjects of animal welfare plan.
- Write a data analytic plan.
- Design a quality control/assurance program.
- Read between the lines of a summary of the review of your application.

Although its focus is on Public Health Service funding, 'How to Write a Successful Research Grant' is equally useful for all research proposals, including graduate students preparing a thesis or dissertation proposal. Service providers in community-based organizations and public health agencies will also find this a useful resource in preparing a proposal to compete for grant funds from state and community resources, non-government organizations, and foundations.

Designing and Managing Your Research Project - David Robert Thomas 2010-10-04

This book provides information about the key

areas needed for a successful project. It includes software skills, developing research objectives, writing proposals, literature reviews, getting ethics approval, seeking funding, managing a project, communicating research findings, and writing reports. There is also a chapter on working as an independent researcher. The book includes numerous examples, checklists, and practical exercises designed to assist the learning of research skills and the completion of crucial project tasks. It covers procedures needed for conducting projects electronically and accessing information from the Internet.

Journal and Newsletter Editing - Josette Anne Lyders 1993

Beginning with the role and responsibilities of the editor, this book discusses editorial outlook, motivation, skills, and policies and procedures that provide guidance for editing. The nature of the workplace, automation, authors and manuscripts, the vital editorial manual, production, and ethics are also covered. Pertinent to editors of journals and newsletters and their contributors, the book is also of value to public and academic libraries; courses in journalism, publishing, and writing; and associations or organizations that publish journals or newsletters.

Nursing Research Using Data Analysis - Mary De Chesnay 2014-12-05

Nursing Research Using Data Analysis: Qualitative Designs and Methods in Nursing is one book in a series of seven volumes that presents concise, how-to guides to conducting qualitative research -- for novice researchers and specialists seeking to develop or expand their competency, health institution research divisions, in-service educators and students, and graduate nursing educators and students.

Supply Chain Management Theory and Practice - Paul D. Cousins 2006

This e-book asks: Is Supply Chain Management an emerging academic discipline? Supply Chain Management (SCM) has continued to grow in prominence within the field of Operations Management and also within the broader discipline of management. Practitioners have begun to adopt and adapt new techniques to supply management that improve firm

performance. Organizations in both the public and private sectors are becoming increasingly aware of the pivotal role that SCM can play in their business success. This is a challenging special issue aimed at stimulating debate rather than providing a definiti.

Final Technical Report for the Award DE-FG02-08ER64574, with List of 30 Refereed Journal Articles that Acknowledge Support from this Award - 2012

In this project, we focused on applications of the new warm-rain and ice microphysics schemes to simulate various cloud systems. The overall goal was either to evaluate and improve specific aspects of the schemes (through comparisons with ARM/ASR observations) or to understand the coupling between aerosols, cloud microphysics and cloud dynamics in variety of situations. These studies are relevant to the indirect impact of atmospheric aerosols on climate. Below we report on selected key aspects of the research and then list all peer-reviewed papers that acknowledge support from this grant. Overall, studies partially supported by this grant resulted in 30 peer-reviewed publications (listed below), several dozens of conference presentations (including posters and oral presentations at the ASR Science Team Meetings), and two PhD dissertations. More detailed summaries of our accomplishments are included in yearly reports. Here we summarize only major efforts.

Guide to Information Sources in Mathematics and Statistics - Martha A. Tucker 2004-09-30

This book is a reference for librarians, mathematicians, and statisticians involved in college and research level mathematics and

statistics in the 21st century. We are in a time of transition in scholarly communications in mathematics, practices which have changed little for a hundred years are giving way to new modes of accessing information. Where journals, books, indexes and catalogs were once the physical representation of a good mathematics library, shelves have given way to computers, and users are often accessing information from remote places. Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics. Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics. These are grouped by type of material. Publication dates range from the 1800's onwards. Hundreds of electronic resources-some online, both dynamic and static, some in fixed media, are listed among the paper resources. Amazingly a majority of listed electronic resources are free.

Teaching and Researching Writing - Ken Hyland 2015-11-19

This third edition of Teaching and Researching Writing continues to build upon the previous editions' work of providing educators and practitioners in applied linguistics with a clearly written and complete guide to writing research and teaching. The text explores both theoretical and conceptual questions, grapples with key issues in the field today, and demonstrates the dynamic relationship between research and teaching methods and practice. This revised third edition has been reorganized to incorporate new topics, including discussions of technology, identity, and error correction, as well as new chapters to address the innovative directions the field has taken since the previous edition's publication. Boxes throughout, including "Concepts" and "Quotes", help to both reinforce readers' understanding of the topics covered by highlighting key ideas and figures in the field, while the updated glossary and resource sections allow readers to further investigate areas of interest. This updated edition of Teaching and Researching Writing is the ideal resource for language teachers, practitioners, and researchers to better understand and apply writing research theories, methods, and practices.

Directory of Scholarly Journals in Turkey -

Metin Kozak 2017-03-07

Scholarly journals are the capillaries of the scientific world, ensuring the circulation of knowledge. Moreover, scholarly journals guide and indicate the scientific development in an academic field of study or in a country. Scholarly journals, which transfer and spread scientific information, are intended to properly fulfill their functions, preventing the transfer of imperfect or incorrect information to the science world. Significant issues are, therefore, inevitable in the characteristics of scientific studies in such disciplines and countries where the scholarly journals do not fulfill their functions properly. This study encompasses all scholarly journals published in Turkey in all fields of science and other disciplines. The reference questions in this study are grouped under three main categories: the contact and publication information, article evaluation, and publishing information. The number of journals in this present study totals 1,910.

Editing the Refereed Scientific Journal -

Robert A. Weeks 1994

Based on the 1992 Conference of Editors at Vanderbilt University, Nashville, Tennessee, this extensive, and up-to-date reference tool brings together the practical, political, and ethical problems of editing refereed scientific journals for the first time. Editors of foremost scientific journals in the field assist authors in understanding the complexities of the three-way negotiations among editors, referees, and authors.

Writing for Science Journals - Geoff Hart 2014-04

One of the key tasks every researcher must perform is publishing their work, and most of this publication will occur in peer-reviewed journals. These publications are essential for promotion, recognition, and creating a dialogue with your colleagues around the world. Unfortunately, writing publication-quality

manuscripts and guiding them through the peer-review process is a difficult, time-consuming, and often frustrating task. In this book, I'll teach you how to make the process easier based on what I've learned from more than 25 years of helping authors publish more than 6000 papers in some of the world's most prestigious journals (including Nature, Science, and PNAS). Writing for Science Journals explains the details of every section of a journal manuscript, including tips and tricks you won't find elsewhere about how to deal with the peculiar ways that journals work with authors and reviewers. I'll also deal with some of the implications of statistics and experimental design that you may have learned in school, but possibly not in an integrated form that guides you through the steps necessary to perform publishable research. In each chapter, I'll provide a list of key points that you can use as the basis for developing a learning plan. I've also provided links to relevant online resources via a Links page that is available only to purchasers of the book, and an errata and additions page (see below) that will provide a forum for expanding on the book until the 2nd edition is available.

Re:search ABC - Liezel Lues 2006-07-01

Delivering research outputs has become increasingly important for many students involved in working towards a research degree. RE:search ABC highlights contemporary practices and provides a framework for an up-to-date understanding of the research process and the key issues associated with it. It integrates a number of imperative topics, including the writing of a research protocol, the applying of methodology in research projects, the respective roles of the supervisor and student, the writing of a scientific article and the presenting of research results. The analysis draws upon both theory and real case studies.

Legal Nurse Consulting - Patricia W. Iyer, MSN, RN, LNCC 2002-11-26

Designed to meet the needs of both novice and advanced practitioners, the first edition of Legal Nurse Consulting: Principles and Practice established standards and defined the core curriculum of legal nurse consulting. It also guided the development of the certification examination administered by the American Legal Nurse Consultant Certification Board. The

extensive revisions and additions in *Legal Nurse Consulting: Principles and Practices, Second Edition* make this bestselling reference even more indispensable. The most significant change is the inclusion of 15 new chapters, each of which highlights an important aspect of legal nurse consulting practice: Entry into the Specialty Certification Nursing Theory: Applications to Legal Nurse Consulting Elements of Triage for Medical Malpractice Evaluating Nursing Home Cases Principles of Evaluating Personal Injury Cases Common Mechanisms of Injury in Personal Injury Cases ERISA and HMO Litigation The LNC as Case Manager Report Preparation Locating and Working with Expert Witnesses The Role of the LNC in Preparation of Technical Demonstrative Evidence Marketing Growing a Business Business Ethics Legal Nurse Consulting: Principles and Practices, Second Edition presents up-to-date, practical information on consulting in a variety of practice environments and legal areas. Whether you are an in-house LNC or you work independently, this book is your definitive guide to legal nurse consulting.

The Elements of Style - William Strunk Jr.

2018-05-11

The Elements of Style William Strunk concentrated on specific questions of usage—and the cultivation of good writing—with the recommendation "Make every word tell"; hence the 17th principle of composition is the simple instruction: "Omit needless words." The book was also listed as one of the 100 best and most influential books written in English since 1923 by Time in its 2011 list.

School Leadership and Strategy in Managerialist Times - Scott Eacott 2012-01-01

This book is dedicated to an analysis and synthesis of research on strategy and school leadership, with the ultimate goal of suggesting a new research programme. Each chapter takes up this challenge through different means, resulting in an overview of the construct of strategy within the practice of school leadership. It is hoped that each of these chapters encourages students, practitioners and scholars to continue to investigate this important topic

and to undertake the methodological challenges set out to advance our understanding of strategy and school leadership in managerialist times. Despite maintain a primarily scholarly focus – as such a focus is exceedingly important for the advancement of any domain of inquiry – it is also recognised that many of the ideas discussed have profound practical significance for schools and those who lead and manage them. The arguments in this book, particularly those in the latter chapters seek to expand the horizons of scholarship and understanding on the topic of strategy and school leadership. Although this should not be interpreted as a prescriptive call for how further inquiry should be undertaken, it is but one voice in the conversation. The reviews, studies, analysis and proposed research programme of this book argue that the strategies of school leaders are of considerable theoretical and practical importance to schools, the governance of schooling and the behaviour and performance of schools. While this book offers a blueprint for further inquiry, it remains for the reader to accept the challenge. Doing so will enable important new insights into strategy and school leadership.

Planning Your Research and How to Write It - Aziz Nather 2015-10-21

This book is a practical guide for residents and young researchers who are planning to embark on research. It details the significant planning one must first do including choosing a suitable experienced clinician as a supervisor, sourcing for a "winning idea" with significant clinical impact, performing a proper review of literature, defining clearly the objectives to be set and adopting the appropriate methodology. Statistical evaluation must be done from the start of the research to define adequate sample size and also for evaluation of the results. It also advises how one should draw upon relevant and appropriate conclusions from the results obtained. The ethics of research is also discussed. An all-important factor in research is the procurement of research grants. Readers are guided how to write a proper research proposal to secure these much needed grants. Many research papers end up as presentations only in local or international conferences. An important additional objective of this book is to guide young researchers how to write their finished

product — as a publication in an important international, refereed journal or as a thesis. Chapters have been specially written with tips for scientific writing, selecting the right journal, writing for an original article for a journal, a review article, a case report as well as for a thesis. Tips are also written on what reviewers of a journal look for in an article as well as what examiners look for in a thesis.

Contents: Introduction: Lessons from Research: A Personal Experience (Aziz Nather) Planning Your Research: Planning Research (Aziz Nather, Jamie Xiang Lee Kee & Haitong Mao) Procuring Research Grants (Haitong Mao & Aziz Nather) Types of Research: An Overview (Jamie Xiang Lee Kee, Haitong Mao & Aziz Nather) Clinical Research (Aziz Nather, Jamie Xiang Lee Kee & Haitong Mao) Choice of Experimental Animals (Aziz Nather, Jane Lim Jia Xin & Elaine Yi Ling Tay) Cadaveric Research (Elaine Yi Ling Tay, Jane Jia Xi Lim & Aziz Nather) Ethics and Statistics: Ethics for Research (Joy Le Yi Wong & Aziz Nather) Statistics for Clinical Research (Yiong Huak Chan) Writing Your Research: Tips for Scientific Writing (Claire Shu-Yi Chan, Wee Lin & Aziz Nather) Choosing the Right Journal (Wee Lin & Aziz Nather) How to Write an Original Research Article for a Journal (Wee Lin & Aziz Nather) Uncovering the Review Article (Zest Yi Yen Ang & Aziz Nather) Writing a Case Report (Zest Yi Yen Ang & Aziz Nather) Writing a Thesis or Dissertation (Zest Yi Yen Ang & Aziz Nather) What is Plagiarism (Eda Qiao Yan Lim & Aziz Nather) Evaluating Your Research: Reviewing an Article (Aziz Nather) What Reviewers Look for in an Original Article (Joy Le Yi Wong, Wee Lin & Aziz Nather) Readership: Residents, medical officers, young surgeons and physicians who want to embark on research.

[Dissertation Research and Writing for Built Environment Students](#) - Shamil G. Naoum
2019-05-14

Dissertation Research and Writing for Built Environment Students is a step-by-step guide to get students through their final year research project. Trusted and developed over three previous editions, the new fourth edition shows you how to select a dissertation topic, write a proposal, conduct a literature review, select the research approach, gather the data, analyse and present the information and ultimately produce a well-written dissertation. The book simplifies dissertation research and writing into a process involving a sequence of learnable activities and divides the process into three parts. Part One covers the necessary groundwork, including: identifying the problem, writing a proposal and reviewing the literature. Part Two covers the research design and includes: approaches and techniques for data collection and constructing and sampling a questionnaire. Part Three covers: measurement of data, analysis of data with SPSS, structuring and writing the whole dissertation, and supervision and assessment. This new edition is packed with updated examples and research samples, making this the

ideal resource for students involved in research in built environment subjects such as construction management, construction project management, facilities management, real estate, building surveying, quantity surveying and civil engineering.

Applied Mass Communication Theory - Jack Rosenberry 2021-09-30

Now in its third edition, this dynamic textbook blends coverage of the major theories and research methods in mass communication to enable students to apply their knowledge in today's media and communication careers. Maintaining a focus on modern professional application throughout, this text provides chronological coverage of the development and use of major theories, an overview of both quantitative and qualitative research methods, and a step-by-step guide to conducting a research project informed by this knowledge. It helps students bridge their academic coursework with professional contexts including public relations, advertising, and digital media contexts. It provides breakout boxes with definitions of key terms and theories, extended applied examples, and graphical models of key theories to offer a visualization of how the various concepts in the theory fit together. *Applied Mass Communication Theory's* hybrid and flexible nature make it a useful textbook for both introductory and capstone courses on mass communication and media theory and research

methods, as well as courses focused on media industries and professional skills. Instructors can access an online instructor's manual,

including sample exercises, test questions, and a syllabus, at www.routledge.com/9780367630362
