**Bibliography of Microwave Optical  
Technology** - A. F. Harvey 2012-12-06

Although microwaves and coherent optics, being two of the largest and most useful branches of electrical engineering to emerge technologically, are usually considered as distinct subjects, many of the underlying fundamental principles,

scientific achievements, and practical applications have common features. Following the evolution of the initial principles and techniques during the closing decade of the last century, microwave engineering has long matured to a stage of ready availability of components, automation and accuracy of measurement, economical manufacturing methods, and application of sophisticated systems. Further, this development of electromagnetic phenomena having spatial and temporal coherence has, based on several centuries of study and practice of noncoherent light, in the last two decades reached the optical region. Hence, it is now practicable to consider a comprehensive treatment of these two fields, division being made by subject matter rather than by the artificial distinctions of frequency and/or wavelength ranges. However, a full text on the combined subjects would be very large and unwieldy and, thus, this Bibliography is presented in the hope that it will prove useful as

a compact reference source to a large body of workers and, by putting forward the latest scientific and technical advances, stimulate a multi-disciplinary approach. The material of the book commences with the fundamentals of radiation and matter, progressing through components and devices, amplification and generation, transmission, reception and processing of information, and methods of measurement to conclude with a wide range of applications.

**Airport Economics in Latin America and the Caribbean** - Tomás Serebrisky 2011-12-05  
Traditionally, air transport infrastructure in Latin America and the Caribbean (LAC) was exclusively under government ownership and

management. Starting in the late 1990s, several Latin American countries implemented innovative public-private partnerships (PPP) that transferred the financing and management of air transport sector infrastructure to the private sector. This book presents the findings of a first-ever, comprehensive study of how LAC region airports have evolved during this notable period of transition in airport ownership. It is an unbiased, positive analysis of what happened, rather than a normative analysis of what should be done to reform the airport sector or to attract private participation. It takes the first step in response to the need for more conclusive information about the influence of airport ownership on economic performance. The book is centered around the study of three dimensions of performance: productive efficiency, institutional set up for the governance of the sector, and financing of airport PPPs. Using rigorous analytical tools, this book answer a series of key questions to evaluate the

introduction of private sector participation in the Latin American airport sector: Are LAC airports technically efficient? How has efficiency evolved in the last decade? Are privately-run airports more efficient than state-operated airports? How do independent regulators compare with government agencies in accountability, transparency, and autonomy? How has the level and structure of aeronautical tariffs changed in recent years? The main audience of this book are air transport practitioners, transport regulators, decisionmakers in transport ministries, and PPP units and academics.

Comparative and Evolutionary Genomics of Angiosperm Trees - Andrew Groover 2017-11-21  
Marking the change in focus of tree genomics from single species to comparative approaches, this book covers biological, genomic, and evolutionary aspects of angiosperm trees that provide information and perspectives to support researchers broadening the focus of their research. The diversity of angiosperm trees in

morphology, anatomy, physiology and biochemistry has been described and cataloged by various scientific disciplines, but the molecular, genetic, and evolutionary mechanisms underlying this diversity have only recently been explored. Excitingly, advances in genomic and sequencing technologies are ushering a new era of research broadly termed comparative genomics, which simultaneously exploits and describes the evolutionary origins and genetic regulation of traits of interest. Within tree genomics, this research is already underway, as the number of complete genome sequences available for angiosperm trees is increasing at an impressive pace and the number of species for which RNAseq data are available is rapidly expanding. Because they are extensively covered by other literature and are rapidly changing, technical and computational approaches—such as the latest sequencing technologies—are not a main focus of this book. Instead, this comprehensive volume provides a

valuable, broader view of tree genomics whose relevance will outlive the particulars of current-day technical approaches. The first section of the book discusses background on the evolution and diversification of angiosperm trees, as well as offers description of the salient features and diversity of the unique physiology and wood anatomy of angiosperm trees. The second section explores the two most advanced model angiosperm tree species (poplars and eucalypts) as well as species that are soon to emerge as new models. The third section describes the structural features and evolutionary histories of angiosperm tree genomes, followed by a fourth section focusing on the genomics of traits of biological, ecological, and economic interest. In summary, this book is a timely and well-referenced foundational resource for the forest tree community looking to embrace comparative approaches for the study of angiosperm trees.

## **Trade Law Volume 2** - Jan H Dalhuisen

2022-04-07

"... remains a must read for practitioners and academics interested in more than the substantive law of trans-border commercial activity." (King's Law Journal) Volume 2 of this new edition covers the transnationalisation of dispute resolution, especially arbitration, and contains a critical analysis of the main challenges to its success, continuing credibility, and effectiveness. The volume distinguishes between commercial, financial, and foreign investment arbitration and concentrates on the status, role, and reasoning of international arbitrators, their limited powers especially in matters of public policy and in property matters, the threat of judicialisation, and the need to connect with mediation and a settlement ethos. The complete set in this magisterial work is made up of 6 volumes. Used independently, each volume allows the reader to delve into a particular topic. Alternatively, all volumes can

be read together for a comprehensive overview of transnational comparative commercial, financial and trade law.

**The Literature of Animal Science and Health** - Wallace C. Olsen 1993

The third of a seven-volume series, The Literature of the Agricultural Sciences, this book analyzes the trends in published literature of animal science and health during the past century with emphasis on the past forty years. It uses citation analysis and other bibliometric techniques to identify the most important journals, report series, and monographs for the developed countries as well as those in the Third World.

**The United States and Multilateral Institutions** - Margaret P. Karns 2003-09-02

World politics in the post-Cold War world has become increasingly institutionalized. However, the role of international organizations has been overlooked in much of the literature on

international regimes. Now in paperback, The United States and Multilateral Institutions examines United States policy in areas ranging from international trade to human rights, and in institutions such as the International Monetary Fund (IMF), GATT and the World Health Organization.

*The Routledge Handbook of Tourism and Sustainability* - C. Michael Hall 2015-02-11  
Routledge Handbook of Tourism and Sustainability from C. Michael Hall, Stefan Gössling, Daniel Scott is one of the winners of the ITB BookAwards 2016 in the category Specialist tourism literature! Sustainability remains one of the major issues in tourism today. Concerns over climate and environmental change, the fallout from the global economic and financial crisis, and the seeming failure to meeting UN Millennium development goals have only reinforced the need for more sustainable approaches to tourism, however they be defined. Given the centrality of sustainability in tourism

curricula, policies, research and practice it is therefore appropriate to prepare a state of the art handbook on the relationship between tourism and sustainability. This timely Handbook of Tourism and Sustainability is developed from specifically commissioned original contributions from recognised authors in the field, providing a systematic guide to the current state of knowledge on this area. It is interdisciplinary in coverage and international in scope through its authorship and content. The volume commences with an assessment of tourism's global environmental, e.g. climate, emissions, energy use, biodiversity, water use, land use, and socio-economic effects, e.g. economic impacts, employment and livelihoods, culture. This then provides the context for sections outlining the main theoretical frameworks and constructs that inform tourism and sustainability, management tools and approaches, and the approaches used in different tourism and travel industry sectors. The book concludes by examining emerging and

future concerns in tourism and sustainability such as peak-oil, post-carbon tourism, green economy and transition tourism. This is essential reading for students, researchers and academics interested in the possibilities of sustainable forms of tourism and tourism's contribution to sustainable development. Its assessment of tourism's global impact along with its overviews of sectoral and management approaches will provide a benchmark by which the sustainability of tourism will be measured for years to come.

### **Gluten-Free Food Science and Technology -** Eimear Gallagher 2009-09-08

Coeliac disease (CD) and other allergic reactions/intolerances to gluten are on the rise, largely due to improved diagnostic procedures and changes in eating habits. The worldwide incidence of coeliac disease has been predicted to increase by a factor of ten over the next number of years, and this has resulted in a growing market for high quality gluten-free cereal products. However, the removal of gluten

presents major problems for bakers. Currently, many gluten-free products on the market are of low quality and short shelf life, exhibiting poor mouthfeel and flavour. This challenge to the cereal technologist and baker alike has led to the search for alternatives to gluten in the manufacture of gluten-free bakery products. This volume provides an overview for the food industry of issues related to the increasing prevalence of coeliac disease and gluten intolerance. The properties of gluten are discussed in relation to its classification and important functional characteristics, and the nutritional value of gluten-free products is also addressed. The book examines the diversity of ingredients that can be used to replace gluten and how the ingredient combinations and subsequent rheological and manufacturing properties of a range of gluten-free products, e.g. doughs, breads, biscuits and beer may be manipulated. Recommendations are given regarding the most suitable ingredients for

different gluten-free products. The book is directed at ingredient manufacturers, bakers, cereal scientists and coeliac associations and societies. It will also be of interest to academic food science departments for assisting with undergraduate studies and postgraduate research. With 66 contributors working together to craft 45 scientifically-based chapters, the text has been completely revised and updated to contain all the latest developments in this field. Building upon the solid foundation of the previous edition, the contents of this book are light-years ahead of the topics presented in the first edition. See what's new in the Second Edition: Marine mammals as sentinels of ocean health Emerging and resurging diseases Thorough revision of the Immunology chapter Diagnostic imaging chapters to illustrate new techniques Quick reference for venipuncture sites in many marine mammals Unusual mortality events and mass strandings New topics such as a chapter on careers Wider scope of coverage including species outside of the United States and Canada Filled with captivating illustrations and photographs, the Handbook guides you through the natural history of cetaceans, pinnipeds, manatees, sea otters, and polar bears. Prepared in a convenient, easy-to-use format, it is

designed specifically for use in the field. Covering more than 40 topics, this one-of-a-kind reference is packed with data. The comprehensive compilation of information includes medicine, surgery, pathology, physiology, husbandry, feeding and housing, with special attention to strandings and rehabilitation. *Fermented Foods in Health and Disease  
Prevention* - Juana Frías 2016-09-12

Fermented Foods in Health and Disease  
Prevention is the first scientific reference that

addresses the properties of fermented foods in  
nutrition by examining their underlying  
microbiology, the specific characteristics of a  
wide variety of fermented foods, and their  
effects in health and disease. The current  
awareness of the link between diet and health  
drives growth in the industry, opening new  
commercial opportunities. Coverage in the book  
includes the role of microorganisms that are  
involved in the fermentation of bioactive and  
potentially toxic compounds, their contribution  
to health-promoting properties, and the safety of  
traditional fermented foods. Authored by  
worldwide scientists and researchers, this book  
provides the food industry with new insights on  
the development of value-added fermented foods  
products, while also presenting nutritionists and  
dietitians with a useful resource to help them  
develop strategies to assist in the prevention of  
disease or to slow its onset and severity.  
Provides a comprehensive review on current  
findings in the functional properties and safety

of traditional fermented foods and their impact on health and disease prevention Identifies bioactive microorganisms and components in traditional fermented food Includes focused key facts, helpful glossaries, and summary points for each chapter Presents food processors and product developers with opportunities for the development of fermented food products Helps readers develop strategies that will assist in preventing or slowing disease onset and severity

**Climate Change and Impacts in the Pacific** - Lalit Kumar 2020-01-31

This edited volume addresses the impacts of climate change on Pacific islands, and presents databases and indexes for assessing and adapting to island vulnerabilities. By analyzing susceptibility variables, developing comprehensive vulnerability indexes, and applying GIS techniques, the book's authors demonstrate the particular issues presented by climate change in the islands of the Pacific region, and how these issues may be managed to

preserve and improve biodiversity and human livelihoods. The book first introduces the issues specific to island communities, such as high emissions impacts, and discusses the importance of the lithological traits of Pacific islands and how these physical factors relate to climate change impacts. From here, the book aims to analyze the various vulnerabilities of different island sectors, and to formulate a susceptibility index from these variables to be used by government and planning agencies for relief prioritization. Such variables include tropical cyclones, built infrastructures, proximity to coastal areas, agriculture, fisheries and marine resources, groundwater availability, biodiversity, and economic impacts on industries such as tourism. Through the categorization and indexing of these variables, human and physical adaptation measures are proposed, and support solutions are offered to aid the inhabitants of affected island countries. This book is intended for policy makers, academics, and climate

change researchers, particularly those dealing with climate change impacts on small islands.

**Dalhuisen on Transnational Comparative, Commercial, Financial and Trade Law**

**Volume 1** - Jan H Dalhuisen 2019-07-25

This is the seventh edition of the leading work on transnational and comparative commercial, financial, and trade law, covering a wide range of complex topics in the modern law of international commerce and finance. As a guide for students and practitioners it has proven to be unrivalled. The work is divided into three volumes, each of which can be used independently or as part of the complete work. Volume 1, in the first chapter, covers the roots and foundations of private law; the different origins, structure, and orientation of civil and common law; the forces behind the emergence of a new transnational commercial and financial legal order, its meaning, concepts, and operation; the theoretical basis of the transnationalisation of the law in the

professional sphere in that order; its methodology and the autonomous sources of the new law merchant or modern *lex mercatoria*, its international finance-driven impulses, and its relationship to domestic and transnational public policy and public order requirements. The second chapter covers the transnationalisation of dispute resolution in that order, especially international arbitration, and contains a critical analysis of the main challenges to its success, continuing credibility, and effectiveness. All three volumes may be purchased separately or as part of a single set.

**Aviation Noise Impact Management -**

Laurent Leylekian 2022-03-15

This open access book provides a view into the state-of-the-art research on aviation noise and related annoyance. The book will primarily focus on the achievements of the ANIMA project (Aviation Noise Impact Management through Novel Approaches), but not exclusively. The content has a broader theme in order to

encompass. regulation issues, the ICAO (International Civil Aviation Organization) balanced approach, progresses made on technologies and reduction of noise at source, impact of possible future civil supersonic aircraft, land-use planning issues, as well as the core topics of the ANIMA project, i.e. impact on human beings, annoyance, quality of life, health and findings of the project in this respect. This book differs from traditional research programmes on aviation noise as the authors endeavour, not to lower noise at source, but to reduce the annoyance. This book examines these non-acoustic factors in an effort to help those most affected by aviation noise – communities living close to airports, and also help airport managers, policy-makers, local authorities and researchers to deal with this issue holistically. The book concludes with some recommendations for EU, national and local policy-makers, airport and aviation authorities, and more broadly a scientifically literate audience. These

recommendations may help to identify gaps for progress in terms of research but also genuine implementation actions for political and regulatory authorities.

EU External Relations Law - Ramses A Wessel  
2020-04-02

The first edition of this seminal textbook made a significant impact on the teaching of EU external relations law. This new edition retains the hallmarks of that success, while providing a fully revised and updated account of this burgeoning field. It offers a dual perspective, looking at

questions from both the EU constitutional law perspective (the principles underpinning EU external action, the EU's powers, and the role of the Court of Justice of the EU); and the international law perspective (the effect of international law in the EU legal order and the position of the EU in international organisations such as the WTO). A number of key substantive policy areas are explored, including trade, security and defence, police and judicial cooperation, the environment, human rights, and development cooperation. Taking a 'text, cases and materials' approach, it allows students to gain a thorough understanding of milestones in the evolution of EU law in this area, their judicial interpretation and scholarly appraisal. Linking these pieces together through the

authors' commentary and analysis ensures that students are given the necessary guidance to properly position and digest these materials. Lastly, each chapter concludes with a section entitled 'The Big Picture of EU External Relations Law', which weaves together the diverse and complex materials into a coherent whole and stimulates critical discussion of the topics covered.
